DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-8 and 15-20 are rejected under 35 U.S.C. 102(a) as being anticipated by the admitted prior art (figure 1) of the instant application.

As shown in figure 1, the admitted prior art teaches a repeater circuit comprising a data recovery circuit (16) and synchronization detection circuit (18). See also page 1, line 1 to page 2, line 10 of the instant application.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (figure 1) of the instant application in view of Banker et al (5,497,187), Andersson et al (5,671,249) or Julyan (5,790,610).

The admitted prior art teaches all subject matter claimed except for using the output of the data recovery circuit to apply to the transmitter to form an outgoing

data. However, Banker (fig. 4C), Andersson (figs. 3 and 4) or Julyan (figs. 1, 2 and 7) teaches using the output of the data recovery circuit to apply to the transmitter to form an outgoing data. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the repeater of the admitted prior art by employing the teachings of Banker, Andersson or Julyan so that the delay for processing the signal received from the receiving end to the transmitting end of the repeater can be reduced.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference Suzuki (5,357,542) is cited because it is pertinent to a repeater circuit.
